## CURRENT PROJECTS

---

(1) **“Estimating the Elasticity of Turnover from Bunching: Preferential Tax Regimes for Solo Self-employed in Italy”**, 2nd PhD project

I exploit the notches created by the eligibility cut-offs of the preferential tax regimes for solo self-employed in Italy to estimate the elasticity of turnover.

(2) **“Optimal Taxation with Heterogeneous Risk Preferences”**, 1st PhD project

This paper investigates the optimal taxation of risky and safe capital income when heterogeneous returns are driven by heterogeneous risk preferences, and (risky) tax revenues finance a (risky) public good that provides insurance against aggregate risk.
